VAIBHAV SAWANT

AI Engineer | Agentic AI & LLM Systems (LangGraph · RAG · MCP) | Python/TypeScript | Immediate Joining
Munich, Bavaria, Germany

Summary

I build agentic AI systems — multi-agent architectures that autonomously handle work that used to take teams weeks. I founded and lead an internal agentic AI initiative where I architect production LLM systems: → A RAG agent that ingests scattered enterprise knowledge (PRDs, Jira tickets, user guides) into a vector knowledge base using embeddings and semantic search, and autonomously drafts grounded, traceable test cases — cutting authoring effort org-wide→ A LangGraph-orchestrated multi-agent system that generates executable Playwright (TypeScript) code with self-review and self-correction stages→ An LLM-assisted migration of a 500K+ line codebase (Java/Selenium → TypeScript/Playwright), completed and stabilized in ~3 months My stack: LangGraph, LangChain, AutoGen, RAG, MCP (Model Context Protocol), vector embeddings, prompt engineering, Python, TypeScript — integrating Claude and GPT via APIs, and running open-source LLMs locally with Ollama and Hugging Face models.Currently deepening production-grade GenAI skills — LLMOps, agent deployment, evaluation, and observability — through Ed Donner's trainings. What makes my profile different: 14 years of engineering rigor in quality systems. Most AI engineers are strong at building and weak at evaluation — I bring testing discipline to AI: evaluation frameworks, guardrails, hallucination measurement, and regression harnesses for agentic outputs. As LLM systems move into production, this is the skill gap teams feel first. Certified: AWS Cloud Practitioner · Anthropic (MCP Server, Claude Code) · ISTQB Open to AI Engineer / GenAI Engineer / LLM Engineer roles where agentic systems are core to the product. Learning German (Goethe A1 Certified) | Open to roles in Germany & EU♂# Certified Yoga Instructor | Mental Health Advocate in Tech

Experience

LogiNext
Principal Engineer, Agentic AI (QA Platform)

July 2025 - Present (1 year 2 months)
Mumbai

Founded and lead the org's agentic AI initiative — architecting production LLM systems that automate engineering workflows end-to-end.

- Architected a RAG pipeline that embeds scattered enterprise knowledge (PRDs, Jira tickets, user guides) into a vector knowledge base with semantic search, enabling an agent to autonomously draft grounded, traceable artifacts — cutting authoring effort org-wide

- Building a LangGraph-orchestrated multi-agent system that generates production-ready Playwright (TypeScript) code, with self-review and self-correction agent stages that reduce defects and rework

- Led an LLM-assisted modernization of a 500K+ line legacy codebase (Java → TypeScript), using AI to translate, refactor, and validate — delivered and stabilized in ~3 months

- Designed evaluation frameworks and quality gates for LLM outputs — regression harnesses, output-consistency checks, and flakiness measurement for agent-generated code

- Own release certification across a 3,500-scenario validation suite spanning 50+ modules; built Jenkins CI/CD pipelines with parallelized containerized execution (Selenoid/Docker) and observability via ReportPortal and Allure

Stack: LangGraph · LangChain · AutoGen · RAG · MCP · Python · TypeScript · Claude/GPT APIs · Ollama · Hugging Face · Docker · Jenkins · AWS
